

Gautam Bhatt

Data Science Engineer

9891342035 | bgautam901@gmail.com | [Linked In](#) | [GitHub](#) | [Portfolio Website](#)
New Delhi, Delhi, India

SUMMARY

- Aspiring Data Science Engineer with hands-on expertise in Natural Language Processing (NLP) and machine learning, adept at leveraging Python, Pandas, and Scikit-learn to build data-driven solutions. Passionate about transforming raw data into actionable insights through robust preprocessing, model optimization, and clear visualization.
-

EDUCATION

Dr. Akhilesh Das Gupta Institute of Professional Studies(GGSIPU) -- (2022 - 2025)

- B-tech in Artificial Intelligence and Machine Learning

Guru Tegh Bahadur Polytechnic Institute -- (2019 - 2022)

- Diploma in Computer Science
 - CGPA : 8.2
-

SKILLS

- Programming Language** : Python, SQL, HTML, CSS
 - NLP & Machine Learning** : Text preprocessing, Data Visualization, Data Preprocessing, Model Selection, Model Deployment
 - Tools & Technologies** : Scikit-learn, Pandas, Numpy, Matplotlib/Seaborn, Git/GitHub
-

PROJECTS

YouTube Comments Analyzer || [GitHub](#)

- Built a YouTube comments analyzer using Python and Natural Language Processing (NLP) techniques to extract and evaluate user sentiment from large datasets.
- Preprocessed textual data by implementing tokenization, stopword removal, etc. using NLTK , ensuring cleaner and more accurate analysis.

What's App Chat Analyzer || [GitHub](#)

- Developed a WhatsApp chat analysis tool using Python to extract and analyze key insights from exported chat data, enabling better understanding of user behavior and conversation trends.
- Preprocessed chat data by cleaning and parsing timestamps, user messages, and emojis using regex and Pandas, ensuring 100% accurate text formatting.

Movies Recommender System || [GitHub](#)

- Developed a movie recommendation system using Python, Pandas, and NumPy, implementing collaborative filtering and content-based filtering algorithms.
- Processed and analyzed large datasets containing user ratings and movie metadata from TMDb using Python, ensuring 99% data accuracy.

SMS Spam Classifier || [GitHub](#)

- Developed an SMS spam detection system using Python and Natural Language Processing (NLP) to classify messages as spam or ham (legitimate).
- Implemented machine learning models such as, Naive Bayes, Support Vector Machines (SVM), Random Forest, and XGBoost for classification, achieving an accuracy of 97%.
