

Gautam Bhatt

Machine Learning Engineer

9891342035 | bgautam901@gmail.com | [Linked In](#) | [GitHub](#) | [Portfolio Website](#)

New Delhi, Delhi, India

SUMMARY

- Aspiring Machine Learning Engineer with hands-on expertise in Natural Language Processing (NLP) and Data Science, adept at leveraging Python, Pandas, and Scikit-learn to build data-driven solutions. Passionate about transforming raw data into actionable insights through robust preprocessing, model optimization, and clear visualization.
-

EDUCATION

Dr. Akhilesh Das Gupta Institute of Professional Studies(GGSIPU) -- (Nov 2022 - Jun 2025)

- B-tech in Artificial Intelligence and Machine Learning

Guru Tegh Bahadur Polytechnic Institute -- (2019 - 2022)

- Diploma in Computer Science
-

SKILLS

- **Programming Language** : Python, SQL, HTML, CSS, Java
 - **NLP & Machine Learning** : Text preprocessing, Data Visualization, Data Preprocessing, Model Selection, Model Deployment, Large Language Models(LLM's), RAG (Retrieval-Augmented Generation)
 - **Tools & Technologies** : Scikit-learn, Pandas, Numpy, Matplotlib/Seaborn, Git/GitHub, HuggingFace, n8n, Langchain, OpenAI, LLAMA, Selenium
-

Work Experience

Apptad Technologies Pvt. Ltd. – (May 2025 - Present | Noida, UP)

AI/ML Intern – (Hybrid)

- **Collaborated on Fleet Management System:** Worked with a cross-functional team to design and implement modules for a transport vehicle tracking and scheduling platform, focusing on efficient data flow and modular architecture.
 - **RFP Bid Evaluation Project with Local LLM:** Contributed to an AI-driven solution to evaluate Request For Proposals (RFPs) using LLaMA 3.2 3B. Extracted scoring criteria and automated bidder evaluation using natural language understanding and RAG.
 - **AI Workflow Automation with n8n:** Built agentic RAG (Retrieval-Augmented Generation) pipelines and automated document processing using n8n workflows integrated with local LLMs and external APIs.
 - **Automated UI Testing:** Developed robust Selenium-based test scripts using TestNG and Maven to validate web application features and improve CI/CD reliability.
-

PROJECTS

Resume Ranking and Filtering System || [GitHub](#)

- Developed a Python-based tool that scores and ranks multiple resumes based on their relevance to a given job description using NLP techniques and similarity metrics.
- Implemented semantic matching between resume content and job requirements using sentence embeddings and cosine similarity.
- Enabled advanced filtering capabilities to shortlist candidates by technology stack, past clients, or custom keywords.

Q/A System for ecommerce website || [GitHub](#)

- Developed a Question Answering (QA) system for an e-commerce platform using Python, transformer-based NLP models (e.g., BERT), and FAISS for efficient semantic search.
- Integrated web scraping pipelines using BeautifulSoup to extract product-related questions and answers from competitor websites for training and evaluation. Preprocessed and embedded product descriptions and user queries using sentence-transformers to enable context-aware semantic similarity matching.

YouTube Comments Analyzer || [GitHub](#)

- Built a YouTube comments analyzer using Python and Natural Language Processing (NLP) techniques to extract and evaluate user sentiment from large datasets.
- Preprocessed textual data by implementing tokenization, stopword removal, etc. using NLTK, ensuring cleaner and more accurate analysis.

What's App Chat Analyzer || [GitHub](#)

- Developed a WhatsApp chat analysis tool using Python to extract and analyze key insights from exported chat data, enabling better understanding of user behavior and conversation trends.
- Preprocessed chat data by cleaning and parsing timestamps, user messages, and emojis using regex and Pandas, ensuring 100% accurate text formatting.

ACHIEVEMENTS

- **Co-ordinated an AI/GenAI workshop:** Assisted in organizing and coordinating a large-scale **AI & GenAI workshop** (25+ colleges, 3rd–4th year students) alongside the **VP of Apptad**, enabling hands-on learning in Agentic AI, real-world industry use cases, and AI-driven career opportunities.
